Attention: Mr. Randy Hall
Staff Environmental Planner

Dear Sir:

RE: Former Imperial Oil Refinery - T.E.L. Sites

Attached please find a copy of the results of lead analysis of soils removed from a section of sewer trench opposite the South T.E.L. plant. Also enclosed is a drawing identifying the trench location. You indicated you would use this in your review of the extent of contamination at the south T.E.L. site. We do not appear to have a detailed figure showing where your sampling was conducted at the south T.E.L. site. As indicated in the meeting January 15, 1990, the contamination may yet be over a wider area that your investigation concluded and this should be confirmed, in our opinion, by a grid type sampling.

Yours truly,

G. NIEMINEN
